GS 93008-3: 2002-07

GS 93008-1: 2012-11, 2018-06

1 Scope and purpose

This Group Standard, along with VDA 232-101 serves as an instrument for the optimization of the environmental compatibility of products and assists as a tool for testing of alternative substances for suppliers, manufacturers and all BMW specialist departments.

The Group Standard does not exempt suppliers and processors from their obligation to comply with all national and international legal regulations regarding hazardous substances and prohibitory regulations resulting therefrom.

The supplier of materials and/or components is obliged to fulfill all registration and reporting responsibilities for materials and their substances according to regulation 1907/2006 (REACH) and analogous laws in other markets immediately.

2 Normative references

This Group Standard incorporates provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. The respective latest edition of the publication is applicable.

3 Prohibited and declarable substances

VDA 232-101 applies to BMW products. VDA 232-101 corresponds to the Global Automotive Declarable Substance List (GADSL). VDA 232-101 contains, among others, requirements from type approval relevant material prohibitions e.g. 2000/53/EG or China GB/T 30512-2014.

In the GADSL, substances and classes of substances are compiled which, according to current knowledge, present potential risks for people and the environment. In addition to the specifications in the GADSL, the specifications in the legal regulations from the day of their publication for certain substances in products shall be adhered to and declare such substances to BMW if they are intended to be used in any concentration. This also applies to all current deliveries within 3 months.

Documentation of the substances of the GADSL shall be carried out in the material data sheet for the respective component in the International Material-Data-System³⁾ (IMDS). In addition entering the material category from VDA 231-106 and its application code is required.

Basic principles for the preparation of a material data sheet are determined in the IMDS Recommendation and the BMW notes regarding the preparation of IMDS material data sheets for BMW⁴⁾. Preparation of the material data sheet shall be in accordance with VDA Volume 2. The preparation of IMDS material data sheets is mandatory, whether an Initial Sampling Report is created or not. If the required IMDS data sheet is not available, BMW will make an "electronic request" via the IMDS system. The supplier is obliged to comply with the deadlines specified in the "electronic request".

The material data sheets shall be submitted at least as "Preliminary MDS" one month after being nominated as a supplier. The "Preliminary MDS" shall be transferred to initial sampling or on-time for the type approval, but the latest 15 months prior to the series launch into "Final MDS". The material data sheets shall be submitted one month after each change in the material composition.

4 Deviations

Variations/alterations of products shall be agreed with the respective department and may require a new sampling inspection.

Legal regulations with an announced and scheduled prohibition of a material and the resulting prohibition regulations and limits of application shall be complied with already during component development, even though the material/substance prohibition may enter into force only after series launch.

5 Additional substances

Additional substances, their constituents and emission values are listed in GS 93008-4. The limit values shall be adhered to.
