

Inspection and Testing Procedure

Process 1	Inspection and testing	Personnel resource	Certified inspectors and testers
		Material resource	No designation
INPUT			
The suppliers shall inspect and test products in accordance with the control plan. <u>In addition, inspections and tests shall be conducted by certified inspectors and test personnel.</u> The suppliers shall record and store the results of inspection in the Inspection Check Sheet, etc. The inspection record (Inspection Check Sheet, etc.) shall include the following items, but are not limited to the following: a) Quantity of products produced b) Type and quantity of nonconformities The suppliers shall utilize the results of the inspection for the following activities to the next production and next model, but are not limited to the following: c) Forecasting of quality level d) Process design e) Equipment design			
Process 2	Submission of inspection and testing results	Personnel resource	No designation
		Material resource	No designation
INPUT			
The suppliers shall submit inspection and test results as required by Honda or based on the frequency of data submittal to Honda. If inspection and testing of control items specified by the Parts Inspection Standard and/or the Model CP list is conducted by sub-suppliers, the sub-suppliers' inspection results shall be submitted to Honda. Inspection records submitted to Honda shall include the following items (however, items of 100% inspection on manufacturing line are excluded). a) Inspection units including follows: - Part number - Part name - Manufacturing number that can identify inspected products - Control numbers such as lot number b) Inspection starts date / completion date c) Inspection items d) Inspection equipment (including information that can identify test equipment) or inspection method e) Photos of equipment /products under inspection, photos of inspection tester f) Control numbers such as manufacturing number, lot number that can identify the follows: - Inspection date - Control number of the inspection tester - Inspection products g) Judgment criteria and inspection results including follows: - Photos of before and after the inspection of the equipment - Photos of before and after the inspection of the parts - Numerical data h) Inspector/ Verifier /Approver			

In addition to the above, the suppliers who deliver to the following Honda manufacturing location shall meet the location-specific requirements.

Honda manufacturing location	Location-specific requirements
<u>Honda Cars India Ltd. (HCIL)</u>	<u>Submission of Monthly Inspection reports</u> <u>HCIL QD New Model shall provide Inspection Result List (standard) of each part to supplier before Dankaku Event & can be revised before Mass Production where -ever required.</u> <u>Supplier shall perform inspection of all parts before delivering to HCIL to ensure that parts meet all requirement as prescribed in the drawing and on inspection result List (Standard).</u> <u>It is required to submit inspection report for each supply during Development.</u> <u>HCIL QD-MPQ will notify supplier for Parts inspection status at HCIL incoming under DOL & NON DOL category by First Week of every Month and subsequent action to be taken by Supplier.</u> <u>It is required to submit inspection report for each part on Monthly basis in regular Mass Production for both DOL & NON DOL parts by 5th of every Month.</u> <u>Inspection Items of Inspection Result list are kept in same sequence while entering actual Observations in Monthly reports for both DOL & NON DOL parts.</u> <u>Each inspection report format bears drawing / part No. and Part name. (Before using the format, it is required to match both the items).</u> <u>Minimum 5 No. or 1 No./cavity inspection report is required or as specified in PQCT. * Inspection report shall be accompanied with identified parts (inspected parts) for the first supply of every manufacturing lot / batch Inspection report shall bear the Lot / Batch No. If subsequent supplies are made of same previous Lot/Batch, then suppliers are required to submit only photocopy of the inspection report already submitted to HCIL along with the first supply, identifying Lot / batch No.</u> <u>These inspection standards may be revised or updated as & when required by HCIL – QD-MPQ.</u> <u>Inspection report other than standard items</u> <u>HCIL - QD-MPQ may ask for the following as & when required</u> <u>Performance test data</u> <u>Material test data</u> <u>Sub supplier's data (sub suppliers / raw material supplier)</u> <u>Some specified parameters already mentioned in the drawing but not covered in the standard format.</u> <u>In process inspection data already indicated in Control Plan.</u> <u>The above information can be provided in the blank standard format.</u> <u>Note</u> <u>Lot No. and batch No. are used to identify the production lot. Distinction made between the two for better understanding is as under.</u> <u>Lot No.: Applicable to HS, HA etc. parts already identified and mutually agreed between HCIL & supplier to have traceability</u> <u>Batch No.: Supplier's own system for distinguishing one production lot with other.</u>

Model CP List (Control item)* :

Regarding specified items in 3.1.1Model CP List, specified 1) Part number / name and 2) Inspection item.

Model CP List (Quality control method) ** :

For the contents above, suppliers set and reflected 3) Quality judgment criteria, 4) Inspection method and 5) Inspection frequency regarding specified items in 3.1.1Model CP List.

Model CP List(Control item)*** :

Regarding specified items in 3.1.1Model CP List, reflected all items from 1) to 5).
