vwnorm-2007-07

1 Scope

This standard specifies the technical content of the design release (Audi) and the engineering release (Volkswagen).

Overall development requirements are to be taken from Volkswagen standard VW 99000, contents of the planning release from VW 99000-1, and contents of the procurement release from VW 99000-2.

2 Terms and abbreviations

The following definitions apply to the application of this standard:

B-release	Procurement release
E-release	Engineering release (Volkswagen)
K-release	Design release (Audi)
PDM	Product description manuals
TLD	Technical Guideline for Documentation (TLD sheet, German abbreviation)
VA	Procedure instructions (German abbreviation)

3 Design Release (Audi) and Engineering Release (Volkswagen)

On a component-specific basis, the design release is a prerequisite for release of manufacturing and delivery of vehicles to customers.

The design release is decisive in terms of product liability; it is granted on a component- and application-specific basis. It confirms the fulfillment of requirements specified in the frozen (LAH freeze) and documented Performance Specifications (in interaction with other components or in the vehicle, if applicable).

The following prerequisites shall be met for the issuance of the design release/engineering release:

- The confirmative tests (virtual and/or experimental) with components, assemblies or vehicles have been carried out after procurement release of the drawing. The components shall meet the requirements specified in the design documentation for which procurement release has been granted without restriction. Testing can be performed on parts from the standard-production process, or on parts from an equivalent process, e.g. auxiliary tools.
- All data have been entered in the bill of materials.
- Component Specifications freeze and archiving have been completed.
- Processing concepts according to VW 91102 Supplement 3 are available.
- All specifications required for manufacturing and quality assurance, e.g. drawings, PDM sheets, legal approval numbers, standards, etc. have been completed and documented in the systems.
- Efficiency of all FMEA measures has been verified in the product and in the process; there is no need for action.
- Preparation of TLD sheets has been completed.

4 Referenced standards

The following documents cited in this standard are necessary for application. In this Section, terminological inconsistencies may occur as the original titles are used.

VW 91102	Environmental Standard for Vehicles; Vehicle Parts, Materials, Operating Fluids; Recycling Requirements, Use of Recycled Material
VW 91102 Supplement 3	Environmental Standard for Vehicles; Vehicle Parts, Materials, Operating Fluids; Requirements for a Recycling and Processing Concept
VW 99000	Overall Requirements for Service Provision within the Framework of Component Development
VW 99000-1	Overall Requirements for Service Provision within the Framework of Component Development; Part 1: Planning Release Planning Release
VW 99000-2	Overall Requirements for Service Provision within the Framework of Component Development; Part 2: Procurement Release
